Lloyds

SWAGELOK® QUALITY SYSTEM

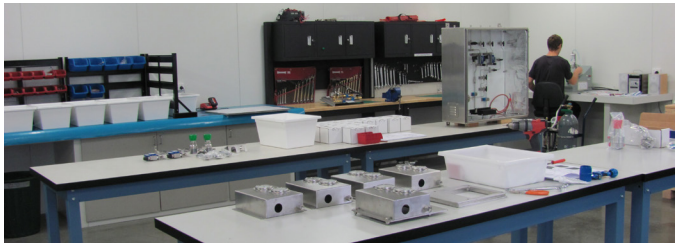
SQS is a Quality Management System that complies with ISO 9001:2008 standards

bsi.

Audited for compliance to standard by BSI Group ANZ

PRODUCTS/CAPABILITIES

Engineering/Manufacturing from Concept to Delivery
High pressure hoses locally assembled
Complete training services
Advisory services
Military HP & LP fittings from vacuum to 60,000PSI
Valves including specialty alloys
Pressure regulation and control
Tubing & tools
Precision welding system
Filters
Quick connects



Boeing Defence Australia

The E7-A Wedgetail provides Australia with one of the most advanced air battlespace management capabilities in the world. Keeping our aircrews safe is critical and working with Boeing Defence Australia, Swagelok's custom pressure test case provides a compact, portable and easy to use method of checking for correct operation of low pressure fuel sensors.

Land 121 Phase 3A

Working closely with Varley Group as the module builder for Mercedes-Benz, Swagelok were critical to the design and supply for the medical oxygen systems for the G-Wagon Ambulances.

Close co-ordination with local medical gas installer MES assured seamless supply of equipment and integration with the Varley production line. Using standard Swagelok components in this critical service makes a user friendly, robust and reliable medical oxygen delivery system which can provide a standard for Australian land forces.

RAAF Williamtown

F/A-18 Wheels and Tanks asked Swagelok to review their Nitrogen delivery which was presenting problems through leaks when charging Hornet tyres.

During inspection, improvements were identified which would improve performance and reliability, as well providing a safer work environment.

Working closely with TFSPO, it was decided that Swagelok would build a panel to provide a low maintenance, reliable solution whilst providing ease of operation and a safe work environment.
